# Aviations Emissions Reporting

## Duration

1 day

## Overview

The objective of this workshop is to familiarise delegates with the proposed rules for Monitoring and Reporting of CO2 emissions from Aviation for the purposes of the complying with the EU Emissions Trading Scheme (ETS).

In addition:

- An overview will be provided on the principles and practices of good management of non-financial data to ensure that the data gathered for reporting and decision making purposes is robust, of high quality, well controlled and appropriate to the Aviation industry
- Experienced ETS emissions inventory advisors and verifiers will be available to respond to questions about how the ETS works, approaches to data accounting, records and evidence requirements and preparation for verification
- An overview will be provided on emerging tools available to support the Aviation's reporting requirements

## Objectives

**Key learning objectives of the workshop include the ability to:**

- Describe the key rules and principles associated with the scheme as it applies to Aviation
- Understand the areas of strength and weakness in data accounting processes, taking into account the particular circumstances for Aviation
- Understand the principles of assurance and verification of data and accounting systems
- Be able to plan and prepare for a formalised reporting process where data verification is required before disclosure. Addressing the particular timescales for Aviation within the EU ETS

## Agenda

- Introduction to the day
- History and Context of Emissions Trading in Europe
- Aviation's links to climate change
- BREAK
- What is Emissions Trading?
- Aviation ETS Rules and Requirements
- LUNCH and Networking
- Aviation ETS Challenges
- Monitoring, Reporting and Verification Principles
- Tools and Techniques for emissions accounting
- BREAK
- Trading activities and Financial Implications
- Questions and Answers
