GHG Management Update

Duration

1 day

Overview

This one-day briefing is designed for executives, decision makers, and operation managers in organizations of all sectors who have begun or are in the process of transitioning into a carbon-constraint economy. The briefing will provide the latest outlook of legislative and regulatory development as well as emerging supply chain pressure related to greenhouse gas emission inventory, reporting, and disclosure in North America. The following two-day course will delve into the specifics of GHG management system.

This is one-of-the-kind comprehensive briefing on current GHG management issues. You will receive not only presentation of timely subject matter information but most importantly, through an open discussion forum, you will gain knowledge and insights into how these development impact your current operations, your near-term obligations, your long-term risks, and how you need to anticipate and formulate responses.

Agenda

- Climate Change Policies in Context
- Summary of Legal and Regulatory Landscape Governing GHG Emissions in North America
- GHG Inventory
- GHG Reporting
- GHG Verification
- Emerging Supply Chain Requirements
- GHG Management - How do you position and response?
